

Varun Nair

nairvarun104@gmail.com | nairvarun.com | github.com/nairvarun | linkedin.com/in/nair-varun

Skills

Languages: Python, Bash

Platforms & Orchestration: Kubernetes (GKE, EKS, VMware Tanzu, k3s), Helm, Kustomize, Docker, AWS, GCP

DevOps & GitOps: ArgoCD, Flux, GitHub Actions, Jenkins, Terraform

Observability: SigNoz, OpenTelemetry, Logstash, Filebeat

Experience

SDE-1 DevOps, Hyperface – Bengaluru, India Dec 2024 – Present

- Architected and delivered greenfield production deployments across Kubernetes (cloud and on-prem), bare-metal, and air-gapped environments for 2 large PSU and 1 international bank, defining deployment patterns for ~30 microservices and driving initial Kubernetes adoption within the company.
- Built a bespoke air-gapped delivery system that applies GitOps principles without network access: each release is a versioned, immutable Docker image bundling the IaC repo and SOPS-encrypted secrets, shipped offline as the source of truth to prevent configuration drift.
- Onboarded 10+ fintech clients onto shared AWS infrastructure by implementing per-tenant isolation using VPC segmentation and IAM boundaries, and integrated each client into a centralised Logstash/Filebeat logging pipeline for unified observability across tenants.
- Deployed a self-hosted k3s cluster and GitHub ARC runners using AWS CDK, replacing a handcrafted Jenkins CI server and now serving CI workflows across 100+ repositories.
- Cut AWS costs by ~20% and reduced GCP spend from ₹3L to ₹10K/month by eliminating stale resources, migrating duplicate workloads from GCP to AWS, purchasing RIs, and rightsizing compute and databases.
- Led TSP audits and implemented infrastructure controls aligned with PCI-DSS v4.0.1 and ISO 27001 requirements, supporting successful compliance validation.
- Mentored and ramped 5 engineers on Kubernetes and deployment workflows, delegating deployment ownership and serving as the escalation point for production issues.

Full Stack Engineer, Plypicker – Remote Intern Feb 2022 – Dec 2022

- Built a Python data pipeline for ingesting 100K+ daily records into S3.
- Led web scraping across 70+ e-commerce websites using Puppeteer and BeautifulSoup.

Projects

Homelab – github.com/nairvarun/homelab Aug 2025 – Present

- Multi-node k3s cluster managed via Flux and exposed externally via Cloudflare Zero Trust tunnels.
- Runs a 3-instance CloudNative-PG HA Postgres cluster backing self-hosted apps like n8n and Ollama.
- AWS and Cloudflare infrastructure are fully managed via Terraform, with S3 remote state and AWS Config enforcing mandatory tags on every resource.

Education

Vellore Institute of Technology – B.Tech in Computer Science Engineering (CGPA - 9.05) 2025

Certifications

AWS: Certified Solutions Architect – Associate 2024

AWS: Certified Cloud Practitioner 2024
